## Ensuring Continuity of Secure Communications

Enterprises across the globe are facing an increased number of security threats, ranging from mere nuisances such as viruses to sophisticated hacking attempts. At the same time, new regulatory compliance requirements force enterprises to bolster their defenses, often putting a strain on the scarce IT resources. To help you keep your systems secure and operational while reducing the total cost of ownership, SSH offers you three comprehensive support plans.

An SSH Tectia Support Plan is an easy and efficient way to maximize your investment in SSH Tectia software and help reduce your total cost of ownership. SSH offers a variety of support plans that provide telephone and online technical support, software updates and upgrades, and self-help tools and notifications. All plans are available with varying levels of support so you get the help you need as promptly as your business needs require.

The global Support Centers of SSH are staffed with competent technical support engineers who have deep knowledge not only of SSH Tectia products but also of communications security and operating systems. They are backed by the original developers of the SSH Tectia solution ensuring an accurate and prompt response to even the most complex technical issues.

From time to time SSH Communications Security releases new updates and upgrades of its products. These versions are available to customers with a current support agreement through the SSH Customer Download Center. Having access to the latest versions of the software enables enterprises to maintain and further develop their secure IT infrastructure, and to ensure continuous secure operations in compliance with laws and regulations.
