

Secure Collaboration 2024: Secure business communications with guaranteed compliance

Why Secure Collaboration 2024?

SSH Secure Collaboration 2024 is a collection of applications that help people access, verify, sign, receive, store, and share sensitive data securely with internal and external stakeholders.

Using regular email, digital data storage, or instant messaging apps isn't going to keep your business safe from cyberattacks.

Secure Collaboration helps you prevent data breaches by building your own authorized and secure channels to:

- Communicate securely via email, even about business-sensitive information
- Store and share data and files in an encrypted format
- Collect data from your customers, partners, or employees in a highly secure manner

What our customers say about Secure Collaboration:

Secure Email

Send and receive encrypted emails without end-user accounts or complicated maintenance. Integrates easily with all email providers.

Secure Rooms

Share sensitive data and documents over the web. Responsive browser interface that works on any devices and allows file sharing without artificial limits.

Secure Forms

Collect data easily with a straightforward GUI and a wide variety of features for creating e-forms. High security to protect your data in transit and keep you compliant with strict regulations (like GDPR or WCAG 2.1).

Secure Signatures

Sign confidential documents digitally and securely with no end-user accounts to manage. Support for various signing processes with flexible configuration and various authentication options.

Secure Messaging

Communicate securely with end-to-end encryption. Control all your real-time communications (instant messaging, voice, and video calls) with flexible deployment on-premises or in the cloud.

"The solution meets our requirements for data security and data protection very well, and above all, the solution is easy to use for both the sender and the recipient."

One of the key criteria has been that the solution does not require any separate program installations from the recipient."

- Lawyer, Partner company

About SSH Communications Security

SSH is the communications security company for humans, systems and networks.

Demanding organizations and enterprises in Europe, North America, and Asia trust us with their mission-critical cybersecurity.

Whether in Finance, Government, Production, Business Management, Logistics, or Healthcare, companies choose the best experts to protect their sensitive and critical data and to defend against business, compliance, and reputational risks.

We provide defensive cybersecurity solutions and related services to keep your critical sensitive data safe – whether your data is in use, in transit, or at rest.

With our proven-in-use and future-proof solutions, your data is safe in any environment.
